

Let's talk about sea level rise

 11 June 2025 – 10:30 am - 1:30 pm CEST

 Inspire Area – European Digital Ocean Pavilion

 United Nations Ocean Conference 2025

Abstract

Poll on Sea Level Rise facts

Angélique Melet – Mercator Ocean International

Begoña Pérez Gómez – Puertos del Estado

In this session, we will talk about sea level rise. How do we monitor sea level changes from space and from the ground? How is sea level rising and how will it rise? What are the main impacts and consequences? What are key scientific advances and challenges regarding rising sea levels? How science can support stakeholders for an informed decision-making process? What adaptation measures can be developed to limit coastal risks and damages?

Before diving into a series of live presentations and demonstrations, we kick-off the session by engaging the audience in a poll on key facts and figures related to sea level rise and illustrated answers. You only need your phone to interactively and anonymously answer the poll and test how much you already know about sea level rise and its impacts.
